\*Save this box for easy return shipping if you move or cancel service. Pack router, power cord and Ethernet cable into the box and affix the free shipping label you receive via email when you cancel service. Router software is proprietary and can be used with Arvig MultiWav service only.

## ***Congratulations! Follow these steps to set up your wireless network:***

- ❶ **IMPORTANT:** if not done previously, visit [MultiWav.Arvig.com](https://MultiWav.Arvig.com) and log in to your online account, and set up your WiFi network name (SSID) and password.
- ❷ Remove the WiFi 6 router from the box and place it upright on a stable surface. Choose a location as high as possible in your home to avoid signal obstructions.
- ❸ Remove the clear, plastic covers from the device—do not block vents.
- ❹ Using the provided Ethernet cable, plug one end into the Arvig MultiWav port in the faceplate or fiber device and the other end into the LAN1/WAN port on the new router.
- ❺ Use the provided power cord to connect the 12V---IN socket to an appropriate power source, and flip the ON/OFF switch to on.
- ❻ Visit your smartphone's app store, and download and install the Plume® HomePass™ app. Then check your inbox for the email **Reset your Plume Password** which will help you finish setting up your Plume account.
